

Public Works Traffic Analysis Comments

Date: 12-16-2024

Subject: Corporate Park of Doral

Permit: LAND-2411-0019

Date Submitted: 11-22-2024

1st Review

Results of the Review:

Approval Recommended

The applicant is proposing to rezone the existing property from Industrial Commercial (IC) to Industrial (I) located at 7785 NW 48 Street the City of Doral. The existing site is currently considered a General Office building (LUC 710) and a Medical-Dental Office building (LUC 720). The applicant is proposing to rezone for the use of Warehouse (LUC 150), General Office building (LUC 710) and Medical-Dental Office building (LUC 720). Based on the Trip Generation analysis, there will be a reduction in Net New Trips for the morning and afternoon peak. The Public Works Department recommends approval.

Advisory comments below are necessary during site plan review process and implementation of the project:

- Approval is subject to review from City of Doral Public Works Department - Plans Review.
- Compliance with the applicable sections of the City's Land Development Code Chapter 77.
- Implementation of the proposed project dealing with roadway construction work, installation of signage, pavement markings and other needed items shall conform to all applicable requirements, standards and regulations of the latest version of the Manual on Uniform Traffic Control Devices (MUTCD), City of Doral, Miami-Dade County Department of Transportation and Public Works, and Miami-Dade Fire Rescue Department.

MEMORANDUM

To: Edna Sibila
City of Doral

From: Adrian K. Dabkowski, P.E., PTOE 
Ariel B. Centurion, E.I. 

Date: July 17, 2024

Subject: Corporate Park of Doral
7705 NW 48th Street
Traffic Study Methodology

The purpose of this memorandum is to summarize the traffic study methodology for the proposed redevelopment of the Corporate Park of Doral located at 7705 NW 48th Street in Doral, Florida. The site proposed for redevelopment is currently occupied by 95,853 square feet of office space and 6,617 square feet of medical office space. There are two (2) redevelopment scenarios being considered. Redevelopment scenario 1 consists of 267,148 square feet of warehousing space and 13,400 square feet of office space. Redevelopment scenario 2 consists of 245,059 square feet of warehousing space, 11,200 square feet of office space, and 6,617 square feet of medical office space. Note the difference in redevelopment scenarios is the existing medical office space which is proposed to remain under redevelopment scenario 2. A project location map and conceptual site plan are provided in Attachment A. The following sections summarize our proposed methodology.

TRIP GENERATION

Trip generation calculations for the existing development and proposed redevelopment were performed using the Institute of Transportation Engineers' (ITE) *Trip Generation Manual*, 11th Edition. The trip generation for the existing development was determined using ITE Land Use Code (LUC) 710 (General Office Building) and LUC 720 (Medical-Dental Office Building). The trip generation for the proposed redevelopment was determined using ITE LUC 150 (Warehousing), LUC 710 (General Office Building), and LUC 720 (Medical-Dental Office Building).

A multimodal (public transit, bicycle, and pedestrian) factor based on US Census *Means of Transportation to Work* data was reviewed for the census tract in the vicinity of the redevelopment. A multimodal factor of 0.7 percent (0.7%) was calculated and applied to the trip generation calculations to account for the urban environment in which the project site is located. It is expected that a portion of employees and visitors will choose to walk, bike, or use public transit to and from the proposed redevelopment. Transit route information will be documented in the report.

Two (2) Miami-Dade County Department of Transportation and Public Works (DTPW) routes and one (1) City of Doral Trolley route currently operate in close proximity (within ½ mile) to the site during the A.M. and P.M. peak hours. Detailed transit route information is included in Attachment B.

- **DTPW Route 36** operates along NW 79th Avenue in the vicinity of the project site with the nearest stop located just north of NW 48th Street. This route operates with approximately

20-minute headways in the eastbound and westbound directions during the A.M and P.M. peak hours.

- **DTPW Route 132** operates along NW 79th Avenue in the vicinity of the project site with the nearest stop located just north of NW 48th Street. This route operates with approximately 15-minute headways in the eastbound and westbound directions during the A.M and P.M. peak hours.
- **City of Doral Trolley Route 2** operates along NW 79th Avenue in the vicinity of the project site with the nearest stop located just north of NW 48th Street. This route operates with approximately 40-minute headways in the eastbound and westbound directions during the A.M and P.M. peak hours.

As shown in Table 1, redevelopment scenario 1 is expected to result in a reduction of 96 net new external vehicular trips during the weekday A.M. peak hour and a reduction of 94 net new external vehicular trips during the weekday P.M. peak hour. Redevelopment scenario 2 is expected to result in a reduction of 83 net new external vehicular trips during the weekday A.M. peak hour and a reduction of 77 net new external vehicular trips during the weekday P.M. peak hour. Trip generation calculations may be revised based on revisions to the redevelopment program or site plan modifications. Detailed trip generation calculations and US Census *Means of Transportation to Work* data are included in Attachment C.

Table 1: Proposed Net New Trip Generation				
A.M. (P.M.) Peak Hour				
Land Use (ITE Code)	Scale	Entering Trips	Exiting Trips	Net New External Trips
<i>Existing Development</i>				
General Office Building (710)	95,853 square feet	141 (27)	19 (132)	160 (159)
Medical-Dental Office Building (720)	6,617 square feet	17 (7)	4 (17)	21 (24)
<i>Redevelopment Scenario 1</i>				
Warehousing (150)	267,148 square feet	42 (17)	13 (41)	55 (58)
General Office Building (710)	13,400 square feet	26 (5)	4 (26)	30 (31)
<i>Net New Redevelopment Scenario 1</i>				
Net New Vehicle Trips (vph)		-90 (-12)	-6 (-82)	-96 (-94)
<i>Redevelopment Scenario 2</i>				
Warehousing (150)	245,059 square feet	40 (15)	12 (40)	52 (55)
General Office Building (710)	11,200 square feet	22 (5)	3 (22)	25 (27)
Medical-Dental Office Building (720)	6,617 square feet	17 (7)	4 (17)	21 (24)
<i>Net New Redevelopment Scenario 2</i>				
Net New Vehicle Trips (vph)		-79 (-7)	-4 (-70)	-83 (-77)

STUDY AREA

As both redevelopment scenarios generate a reduction in net new external trips, no other external intersections or roadways are proposed to be analyzed.

TURN LANE ANALYSIS

A right and left turn-lane analysis will be conducted at the intersection of NW 79th Avenue and NW 47th Street/NW 48th Street. The analysis will determine whether exclusive right-turn lanes or left-turn lanes will be required based on Section 77-46 of the City's Code of Ordinances and Florida Department of Transportation's (FDOT) *Multimodal Access Management Guidebook*, 2023.

DOCUMENTATION

The results of the traffic analysis will be summarized in a technical memorandum. The memorandum will include supporting documents related to the analyses performed. The memorandum will also include text and graphics necessary to summarize the assumptions and analysis.

Table Notes

Means of Transportation to Work

Survey/Program: American Community Survey
Universe: Workers 16 years and over
Year: 2022
Estimates: 5-Year
Table ID: B08301

Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, the decennial census is the official source of population totals for April 1st of each decennial year. In between censuses, the Census Bureau's Population Estimates Program produces and disseminates the official estimates of the population for the nation, states, counties, cities, and towns and estimates of housing units for states and counties.

Information about the American Community Survey (ACS) can be found on the ACS website. Supporting documentation including code lists, subject definitions, data accuracy, and statistical testing, and a full list of ACS tables and table shells (without estimates) can be found on the Technical Documentation section of the ACS website.

Sample size and data quality measures (including coverage rates, allocation rates, and response rates) can be found on the American Community Survey website in the [Methodology](#) section.

Source: U.S. Census Bureau, 2018-2022 American Community Survey 5-Year Estimates

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see ACS Technical Documentation). The effect of nonsampling error is not represented in these tables.

Workers include members of the Armed Forces and civilians who were at work last week.

Several means of transportation to work categories were updated in 2019. For more information, see: [Change to Means of Transportation](#).

The 2018-2022 American Community Survey (ACS) data generally reflect the March 2020 Office of Management and Budget (OMB) delineations of metropolitan and micropolitan statistical areas. In certain instances, the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB delineation lists due to differences in the effective dates of the geographic entities.

Estimates of urban and rural populations, housing units, and characteristics reflect boundaries of urban areas defined based on 2020 Census data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

Explanation of Symbols:

- The estimate could not be computed because there were an insufficient number of sample observations. For a ratio of medians estimate, one or both of the median estimates falls in the lowest interval or highest interval of an open-ended distribution. For a 5-year median estimate, the margin of error associated with a median was larger than the median itself.
- N
The estimate or margin of error cannot be displayed because there were an insufficient number of sample cases in the selected geographic area.
- (X)
The estimate or margin of error is not applicable or not available.
- median-
The median falls in the lowest interval of an open-ended distribution (for example "2,500-")
- median+
The median falls in the highest interval of an open-ended distribution (for example "250,000+").
- **
The margin of error could not be computed because there were an insufficient number of sample observations.
- ***
The margin of error could not be computed because the median falls in the lowest interval or highest interval of an open-ended distribution.
- *****
